Vision

- Empower individuals
- Revolutionize work
- Trend: Growth of gig-economy
 - Create identity through **Profile**
 - Collaborate through Tasks
 - Create Decentralized Organizations

Goal

We aim to be a provider of technological infrastructure.

We match organizational needs to personal skills.

We increase societal productivity.

3 Tier Architecture

Presentation Tier

React components

Logic Tier

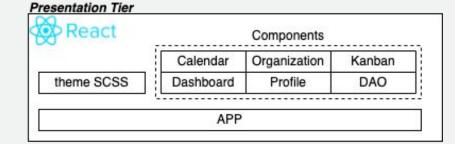

Custom Pallets

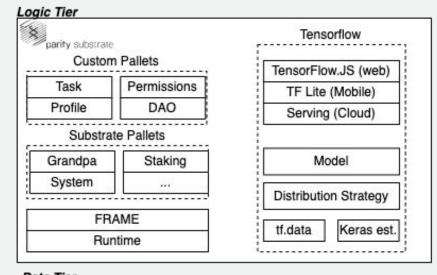

Tensorflow

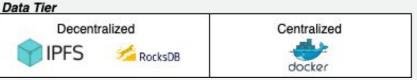

Data Tier

Decentralized(IPFS, RocksDB)

Centralized(MongoDB, Hadoop HDFS)

How the application works

Individual creates profiles

Profiles creates organizations

Organizations create tasks

Tasks are completed by individuals

Individuals are rewarded by native token of organization

Universaldot.me dApp

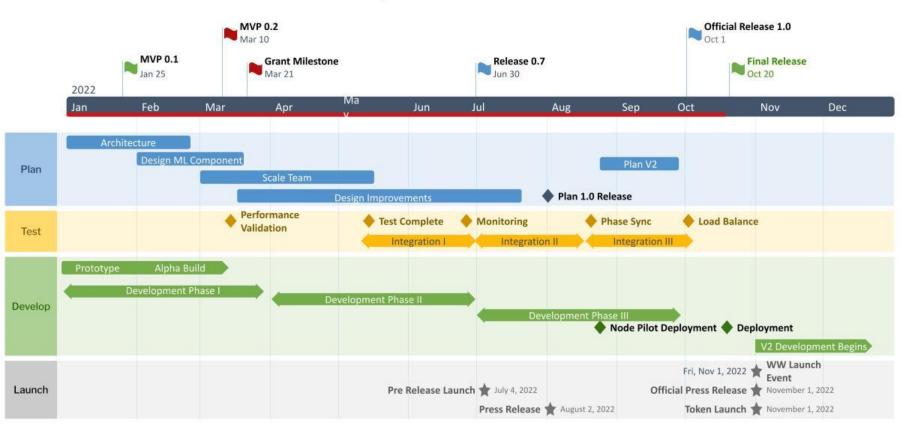

Features

- 1. Open Source
- Decentralized deployment
- 3. DAO's

Roadmap

Development Milestones

Milestone 1 - January 1st/March 31

- Develop at least 3 Substrate pallets that provide minimal viable functionality for the product.
- Implement tests/benchmarks for the pallets.
- Implement an initial version of the front-end application with React.
- Start Testnet network.
- Setup integration test framework for end-to-end tests (Cypress).

Milestone 2 - April 1st/June 30th

- Revamp pallets design with additional functionality.
- Integrate Tensorflow components into the existing technology stack.
- Complete Redesign and reimplementation of DAO pallet and front-end application.
- Create Design for integration with IPFS.
- Complete CI/CD pipelines and automated testing.

Milestone 3 - July 1st/September 3

- Milestone 3 July 1st/September 30th
- Complete integration of Tensorflow with trained ML models.
- Integration with IPFS.
- Complete Integration Tests Suite.
- Production-ready application with improved front-end.
- Launch Mainnet nodes.
